

15U CABINET

15U-47U W600*D800mm Data center server rack consists of frames and covers (doors), and generally it has a rectangular parallelepiped shape and works on the floor. It provides a suitable environment and safety protection for the normal operation of electronic equipment. Data center server rack is the first and basic level in the whole data center system. If a server rack is without covers or doors, we name it as open rack
