42RU CABINET

42RU server cabinet consists of frames and covers (doors), and generally it has a rectangular parallelepiped shape and works on the floor. It provides a suitable environment and safety protection for the normal operation of electronic equipment. Datacenter server rack is the first and basic level in the whole data center system. If a server rack is without covers or doors, we name it as open rack.

Doors

Front door: tempered glass door with spring lock

Rear door: solid steel door with small round lock

Removable side doors, optional for small round lock
